

Polaris RZR Tree Kickers

Installation Instructions

Step 1: On either side of your RZR remove the 2 torx bolts along the bottom of the body. There is also a third torx bolt near the back of the door that must be removed. These bolts will be reused

to mount the tree kickers.

Step 2: Hold the tree kicker up to the side of the RZR and install the 3 torx bolts through the 1/4" holes in the mounting brackets, threading them into the original locations. Leave them loose until all 3 are started. Then proceed to tighten them.

Step 3: Take 2 of the 4 supplied expansion bolt assemblies (being sure to not disassemble them) and insert them into the 2 holes making sure the flats of the expansion sleeve align with the flats of the holes in the mounting brackets and tighten them.

Step 4: Repeat steps 1 thru 3 on the other side of your RZR and you're done!
