

## RZR PRO R 4 CYL SECONDARY BUTTER SHIFT WASHERS

Thanks for purchasing your Butter Shift secondary washers from AA! These washers are designed for the P90X extreme duty secondary clutch found on Polaris Pro R 4 cylinder models. These Butter Shift washers are meant to prevent spring binding for smoother shifts, and less clutch harmonics. They also add a bit of spring tension, normally 10-15lbs on the finish rate of a spring. This further helps prevent clutch slip in most cases. Installation is easy, just make sure you install both washers on top of each other in the helix. See the images below.
