

# 2016 XPT LARGE INJECTOR SET / 2017-UP RZR TURBO OEM REPLACEMENT INJECTOR SET

Thank you for purchasing your replacement injectors from Aftermarket Assassins! 2016 XPT Models: Keep in mind you can only run tunes meant for larger injectors with these injectors. If you must go back to the factory tune for any reason, you **must** swap injectors back to the stock ones. Installation is very easy and will take less than a half hour for most.

Watch this install on our youtube channel: <https://www.youtube.com/watch?v=UuXbJ3mq1rQ>

- Remove your access panel in the bed and locate your fuel rail as shown in the first image below
- Remove the injector connectors by pushing inward on the metal clip
- Use carb cleaner and compressed air to blow out any loose dirt below/around the injectors
- Remove the two 8mm bolts holding the fuel rail in place
- Put rags down around the injectors to catch the excess fuel from pulling the injectors (2nd image)
- Pull back on the fuel rail and pull the injectors out of the intake manifolds
- Remove the injector clips by slightly spreading them and pushing down
- Remove the injectors from the fuel rail \*\*\*Use caution as fuel will flow from the fuel rail\*\*\*
- Remove any rags and clean up any residual fuel leftover
- Install your fuel injectors in the fuel rail keeping in mind that the clips have a slot and peg that must align properly
- Install the clips so the slot and peg align with those on the injector. To test that they are installed properly, make sure the injector cannot pivot in the fuel rail. If the injector can pivot, they are not installed correctly. The video shows/explains this even better.
- Install the fuel injectors into the intake manifold, then install the two 8mm bolts and tighten
- Install the fuel injector connectors
- Turn the key on and check for any fuel leaks
- 2016 XPT Models: Load the AA large injector tunes if you have not already done so
- Go ride!
